

BABY LOCK SEWING ACCESSORIES

Metal Roller Foot

(BLSO-RF)

This efficient roller foot is great for controlling materials that are difficult to feed, such as silk, leather, velvet, vinyl, micro fibers, and suede. The metal rollers help move the foot freely across various fabric thicknesses without any damage or impressions.

MACHINE SETTINGS

Stitch type:	Straight, zigzag or decorative stitch
Stitch width:	Maximum 7mm
Stitch length:	1-5mm

Top

Bottom

3. Check the pressure of the presser foot when using either very thin or very heavy fabrics. Adjust the presser foot pressure on the machine if needed. The metal rollers provide more control of the fabric by keeping the fabric tightly pressed against the feed dogs. This prevents slippery fabrics such as silk, or other fabrics such as leather, velvet, vinyl and elastic from improperly feeding.
4. As you sew the rollers move the foot freely across the fabric allowing it to ride over various thicknesses.

Instructions

1. Remove the standard presser foot and attach the metal roller foot.
2. Select the stitch, the Baby Lock Roller Foot is most commonly used with a straight stitch or a zig zag stitch. Decorative stitches can be used as long as you narrow the stitches and check your needle clearance before you begin stitching.
